

Business Case: Chatbot Senior Specialist — Adidas LAM

Presentation: 20 min · Q&A: 10–15 min

1. Background

You are taking ownership of the Adidas LAM chatbot, which operates across multiple countries in the region. The bot handles customer contacts primarily around orders, payments, and returns — serving as the first line of support across our digital channels.

The CX team has identified significant performance gaps across the three core KPIs. Below is the current state:

KPI	Current	Target	Gap
Containment Rate	48%	55%	-7pp
Repeat Rate	28%	18%	+10pp
Resolution Rate	30%	50%	-20pp

These gaps represent both a cost and a customer experience risk. The bot is currently escalating more contacts than expected to human agents, customers are returning to the bot without resolution, and the overall share of fully resolved interactions remains well below industry benchmarks for retail.

2. What you will work with

You will be provided with the following data ahead of your presentation:

A. KPI dashboard

- Containment rate — current: 48% / target: 55%
- Repeat rate — current: 28% / ambition: 18%
- Resolution rate — current: 30% / target: 50%

B. Contact distribution by category and subcategory

A breakdown of contact volume (%) by category and subcategory, segmented across three handling modes:

- **Handled by bot** — fully resolved without human intervention
- **Handled by human agents** — escalated and fully managed by a live agent
- **Hybrid** — bot initiates, human agent completes or assists

Use this breakdown to identify where the bot is already performing well, where it is falling short, and which categories represent the highest opportunity for improvement.

You may use all or part of this data. You are not expected to build a complete solution — you are expected to demonstrate how you think.

3. What we're asking you to prepare

Prepare a 20-minute presentation that addresses the following:

- **1. What** is your diagnosis of the current state of the bot? Where are the biggest opportunities?
- **2. Which** flows or intents would you prioritize improving, and why?
- **3. How** would your proposed improvements impact the three KPIs? What does success look like in 30, 60, and 90 days?

You are free to make assumptions where data is missing — just state them clearly.
